

10 Ways A CMMS Helps With Compliance.

1

Track Work Order History

Provide detailed documentation on equipment scheduling and proof of work to track mechanical integrity.

2

Document Procedures

Provide documentation of all procedures and verification that they are being carried out in accordance to written procedures.

3

Attach Documents to Records

Easily access safety manuals and procedures, document compliance and track progress.

4

Track Inventory & Spare Parts

Accurately catalog spare parts, record part history and maintain accurate parts inventory and storeroom values.

5

Track Labor & Hours Spent

Maintain accountability for all maintenance activities performed by each technician throughout the facility, as well as hours spent on each activity.

6

Auto-Generate PMs

Provide documentation of all completed and scheduled PMs on each asset.

7

Generate Reports & Dashboards

Run reports showing data required for inspections and audits, and generate reports on KPIs for management visibility.

8

Track Work Requests

Improve workflow efficiency and communication, and ensure on-time completion of work orders.

9

Automate Email Alerts

Keep technicians up-to-date with inspection and audit PM tasks from anywhere, anytime.

10

Track Calibration

Provide documentation of equipment calibration schedules and procedures, and track completion and on-time performance.
